

- project edit page looks good
- focus on polish
 - nice home page
 - getting rid of themes
 - other fonts?
 - our base color scheme
 - our color schemes might seem too feminine or juvenile for some people
 - some people don't like helvetica
 - ff tisa
 - underlines: for any links, instead of underlines, do a border of 2 px at the bottom, easy to change color, add animations, add gradients for example
- user profile image in the corner of the nav bar
- resizing nicely when the browser is resized
- green teal clashes with dark background on portfolio page
- make about us images change to black and white on hover
 - have two images layered and on hover have top image fade away
 - webkit filters and mods/mozilla filters, change color filters on hover
- features page and icons are too big/ might want to change color scheme
- maybe navbar can be a different color?
- note that the graph is extracted from data from github
- remove extra underline on hover (idk what this refers to, isabella should know)
- the graph doesn't add that much to the portfolio
 - unless we allow you to filter the projects by different languages
- hard limit on the number of projects you can have in your portfolio (like 7-9)
- should be clearer to the user whether they're looking at the final version of their portfolio or some editing one
 - have a 'view as public' button or an explicit 'edit mode'
- don't show picture if it's the default pixelated gravatar
- let people type in a blurb about themselves, which goes in the header for the portfolio
- overall rethink the color scheme, maybe use colorlovers which has a bunch of color palettes
